Aman Garg

Senior AI Engineer | Data Scientist
+91-9309815072 | garg.aman96@gmail.com | LinkedIN | Pune, India

Summary

AI Engineer with 3 years designing LLM systems end to end, including RAG, knowledge-graph retrieval, agentic workflows with LLM tool-calling, and document extraction, on Azure OpenAI, Vertex AI, LangChain, LangGraph and Neo4j. Delivered document extraction, text-to-Cypher analytics and explainable claims prediction, from feature engineering and retrieval design to evaluation and user-facing apps.

Technical Skills

GenAI: LLMs, RAG, KG-RAG, AI Agents, Vector Search, Prompt Engineering, Hybrid Search, RAG Evaluation
GenAI Frameworks: LangChain, LangGraph, OpenAI, LlamaIndex
Vector Databases: FAISS, ChromaDB, Azure AI Search, PG Vector
Data Science: EDA, Feature Engineering, Predictive Modeling, Model Evaluation, Machine Learning
Cloud & Platforms: Azure OpenAI, Azure AI Foundry, Azure ML Studio, Google Vertex AI
Languages & Tools: Python, SQL, Neo4j, Pandas, Streamlit, Git, Flask

Experience

CitiusTech Healthcare Technology Pvt. Ltd. Oct 2023 – Sep 2026
Senior AI Engineer *Pune, India*

Explainable Claims Denial Prediction | *Azure OpenAI, Azure ML Studio, Python, Pandas, Neo4j*
- **Goal:** Predict which claims are likely to be denied to due Authorization category, with a clear reason for each prediction.
- Built patterns for every sub category under Authorization by selecting the key features from **400+ raw claim columns** using domain understanding.
- Leveraged an LLM to find features that weren't considered from domain point of view.
- Used Neo4j to ingest patterns to match new claims for denial.
- Flow: new claim → match against patterns in Neo4j → denial prediction + the rule behind it.
- Partnered with DevOps team to build a reusable pipeline for all denial categories.

Conversational Analytics on a Healthcare Knowledge Graph | *Neo4j, LangChain Tools, Azure OpenAI, Streamlit*
- **Goal:** Allow non-technical business users analyse an enterprise knowledge graph without writing Cypher.
- Developed a chatbot on top of a Neo4j knowledge graph that answers questions in plain English and visualizes the result in graphs.
- Designed the LLM tool-calling flow: User Question → Re-write query → Fetch Schema → Cypher query → Run on Neo4j → Insights from result in natural language
- Integrated an LLM-driven chart selection and generation step, delivered via a self-serve Streamlit application.

Vector RAG vs. Knowledge Graph RAG | *Google Vertex AI, Vector Search, Neo4j LLM Graph Builder, LangChain*
- **Goal:** Evaluate Vector RAG and Knowledge Graph RAG over **100+ HR policy documents**.
- Implemented a Vector RAG pipeline on Vertex AI and a Knowledge Graph RAG pipeline with Neo4j LLM Graph Builder.
- Evaluated both with an in-house LLM evaluation framework and presented the findings to stakeholders.
- Vector RAG performed better for single-policy questions and KG RAG performed better for questions spanning several policies.
- Offered both as selectable modes in the final chat app, so users get the right approach per question.

GenAI Document Intelligence | *Azure OpenAI, GPT-4, LangChain, RAG, Python*
- **Goal:** extract key fields from insurance payor documents without training a separate model per payor.
- Designed one LLM + RAG pipeline that replaced 3 per-payor Azure Document Intelligence models.
- Built custom PDF parsing and retrieval for unstructured SPD documents while RAG tooling was still early.
- Flow: parse PDF → find the relevant section → LLM answers a set of field questions → structured output.
- Enables effortless scaling by requiring only a new question set rather than retraining the model to add a new payor.

Additional Projects
- **Test Case Generation:** Designed the architecture for a RAG pipeline to write test cases from code.
- **Smart Search Enhancement:** added voice input, user personas and guardrails to a GenAI search app.

Education

Symbiosis Centre for Information Technology (SCIT) 2021 – 2023
MBA, Data Sciences & Data Analytics – Symbiosis International University *Pune, India*

Symbiosis Institute of Computer Studies and Research (SICSR) 2018 – 2021
Bachelor of Computer Applications – Symbiosis International University *Pune, India*
